Nova Scotia

ANNUAL REPORT

Department of Government Services

90-05176/

Nova Scotia

The Honourable
Lloyd R. Crouse, P.C.
Lieutenant Governor
Province of Nova Scotia

May It Please Your Honour

I respectfully submit, herewith, the annual report of the Department of Government Services for the fiscal year ending March 31, 1989.

I have the honour to be, Sir
Your Obedient Servant,

Terence R.B. Donahoe, Q.C.
Minister

Nova Scotia

The Honourable
Terence R.B. Donahoe, Q.C.
Minister, Department of
Government Services
Province of Nova Scotia

Sir

I hereby present to you the annual report for the Department of Government Services for the fiscal year ending March 31, 1989.

Respectfully Submitted,

D.D. Hiltz
Deputy Minister

THE DEPARTMENT OF GOVERNMENT SERVICES

Daily Support Services

- provides the daily support services to all government departments, agencies, boards commissions, Crown corporations and the Legislature
- provides these services directly or through contracts with private sector suppliers in the most efficient and cost-effective manner
- operates as the government's landlord in providing accommodations, property maintenance and security services
- develops a wide range of creative information products for public and internal information programs
- acquires certain furniture, equipment and other supplies required by departments
- provides for the interdepartmental delivery of mail and other goods
- disposes of Crown property
- administers a government-wide insurance and risk-management program
- provides stationery and office supplies as well as records storage and inventory controls
- operates the provincial data and micrographics centres.

The Department of Government Services offers other government departments a diverse array of professional and technical expertise. This expertise is contained in four major divisions—Design and Construction Services, Finance and Administration, Property and Operation Services, and Systems and Computer Services.

This group of about 650 employees located throughout Nova Scotia provides government with much of what is required to operate smoothly—from stationery to buildings, from couriers to telecommunications systems. The department also connects other government departments to private sector services such as architectural, creative design, construction and software development services. In these situations, our expertise is used to monitor the services provided.

DESIGN AND CONSTRUCTION SERVICES

Building for Tomorrow

> provides architectural and construction management services for construction and alterations to all government buildings

> provides architectural conception, evaluation and design work for construction projects, either directly or through the private sector

> supervises the developmental phases of building projects

> supervises tender calls and all aspects of contract administration

> renovates, alters and repairs existing buildings

> provides consulting services for installation, operation and repair of specialized structural, mechanical, electrical and allied engineering facilities for all government departments

> provides engineering and technical resources for design, construction, operation and maintenance of all government-owned buildings.

When government is called upon to provide facilities, Design and Construction architects, engineers and project managers are on site, guiding the work and providing technical support. They also build and renovate office buildings for government use.

CAPITAL CONSTRUCTION EXPENDITURE BY DEPARTMENT

Overview

The division is divided into four sections, each providing expertise in a different area of building construction.

The **Architectural Services** section provides architectural conception, evaluation and design work for construction projects, either directly or through the private sector. This section scheduled projects during the design and tender stages of projects.

Providing engineering and technical resources for contruction and maintenance of government buildings is the role of the **Engineering Services** section. Staff in this section also approve mechancial and electrical designs prepared by private sector consultants, and provide consulting services on specialized structural, mechanical, electrical and allied engineering facilities for government.

Renovations, alterations and repairs to government buildings are carried out by the **Construction Services** section. This section also manages construction on small projects designed by Architectural Services staff.

The **Project Management** section is responsible for all aspects of major capital construction projects such as schools and hospitals.

The division managed 60 major capital projects in 1988-89, with a total estimated value of $230,499,000 under design. Design was completed, tenders called and construction contracts awarded on 38 capital projects, valued at $107,329,610. Construction continued on 18 major capital projects from the previous year, valued at $65,597,312, and was completed on 26 major capital projects, valued at $62,648,151.

Highlights and New Initiatives

> The Forestry Nursery and Education Complex, located in Middle Musquodoit, may be the first in Canada to deliberately combine forest nursery with a forest resource centre. Located within an hour's drive of half the province's population, the complex is intended to create greater public awareness of the forest resource and its importance to Nova Scotians and Canadians.

> This year, the final stages of the transformation of the old Dominion Building into the Art Gallery of Nova Scotia were completed. The project began in March 1986 and in November 1988 the Art Gallery of Nova Scotia opened its new doors to the public. The transformation has been acknowledged as a significant addition to the cultural life of Nova Scotia. A separate contract on the same building includes refurbishing the exterior stonework. This work is being carried out under the province's apprenticeship program. Refurbishing the north and west faces of this Halifax landmark is complete.

> The final program for design and construction of the Central Services Building on Young Street for the department was finalized and construction was well underway. Completion date is anticipated for the Fall of 1989. This project is transforming the old Liquor Commission warehouse into a facility that will house the province's Computer Services Centre, the Queen's Printer, Stationery Stockroom, Publishing, Carpentry, Mechanical and Electrical shops, the Provincial Records Centre, Micrographics, and storage facilities for the Public Archives. It involves extensive planning and cooperation between various government departments and the project design/construction team. The completed project will provide much improved facilities for all involved government departments.

> The South Shore Regional Hospital in Bridgewater was completed and occupied by August 31, 1988. This $19.7 million complex is state-of-the-art. Its occupancy marked the culmination of 2 1/2 years of extensive design and construction.

FINANCE AND ADMINISTRATION

Financial and Human Resource Managers

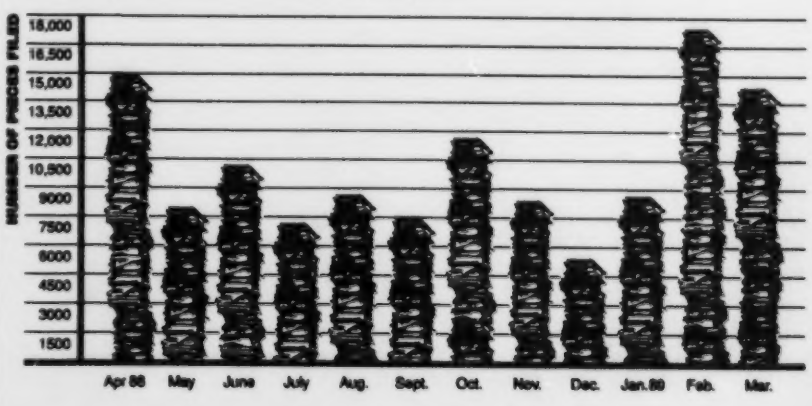
- > provides financial, administrative and personnel services for the entire department
- > provides accounting and financial reporting services
- > processes financial transactions
- > coordinates budgets with other divisions
- > develops and implements human resource management matters
- > administers employee compensation
- > monitors performance appraisals, as well as organizational reviews and development
- > implements and manages the department's Records Management Program through the Central Registry
- > manages use of space, equipment acquisitions, and furniture inventory records for the department.

Timely and accurate recording, controlling and reporting of financial and human resource activities is essential to any organization. In the Department of Government Services, the Finance and Administration Division provides this service through three sections: Financial Services, Administrative Services, and Personnel Services.

Activity in Finance and Administration is directly related to the level of service provided by other divisions of the department.

The department's net budget for 1988-89 was $41,040,500. This amount, while significant, represents only part of the department's activities. Gross expenditures totalled $78,084,000, of which $37,043,500 was recovered from users.

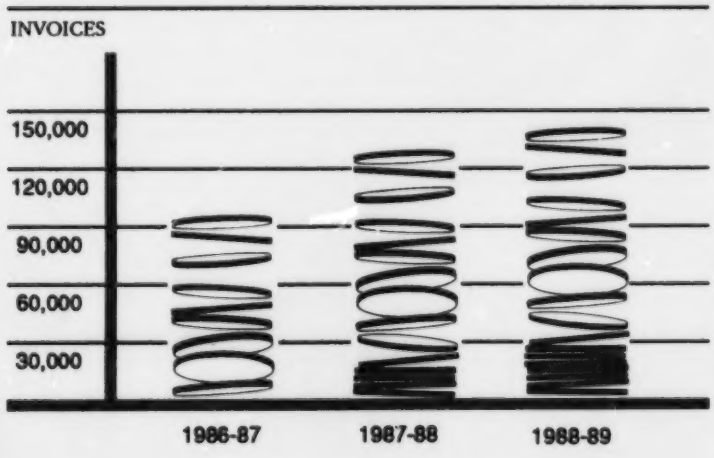
CENTRAL REGISTRY STATISTICS 1988/89



Overview

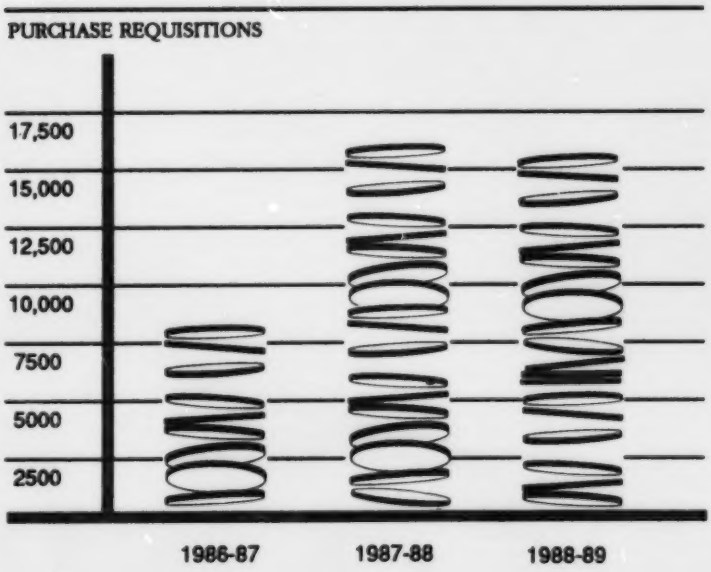
Financial Services staff processed more than 138,000 invoices in 1988-89, an increase of 11 percent over the previous year. Accounting personnel were physically located in the operating divisions of the department. This decentralization of staff has increased the efficiency with which invoices are processed and has provided more timely information to the operating divisions.

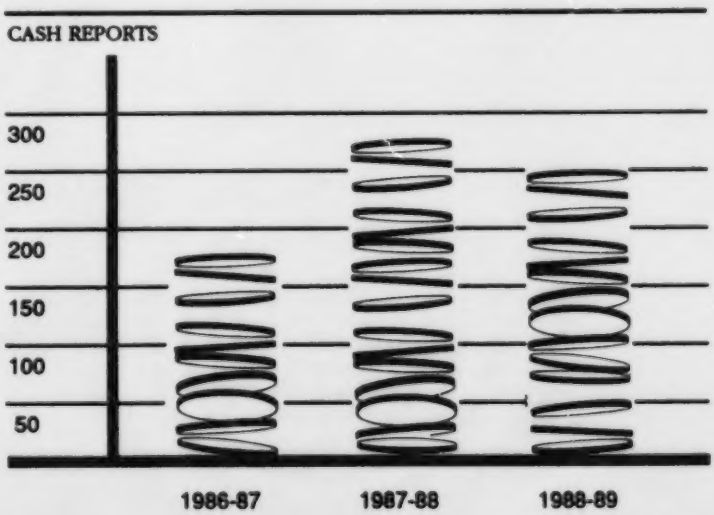
Administrative Services includes the Central Registry, facsimile facilities, the internal delivery and collection of mail, secretarial services, departmental switchboard, and the procurement of stationery and sundry supplies. The section is also responsible for occupational health and safety matters within the department. During the year, responsibility for collection and delivery of all departmental mail was assigned to a staff member to improve efficiency. Successful implementation of the department's Records Management Program continued during 1988-89. By year-end, 119,750 pieces of information had been processed, an increase of 32 percent over the previous year. Requests for files totalled 7,231, and 5,367 files were created during the year. As of March 31,1989, the Central Registry held 11,326 files.



Personnel Services coordinated the selection and appointment of 30 civil service positions, including 6 promotions from within the department, and hired 23 casual employees. As well, 22 students were employed during the summer months. The Apprenticeship Program accepted 7 apprentices from the trades section, bringing the total enrolled in the four-year program to 20. Under the Affirmative Action Program, 4 permanent and 3 casual positions were filled. Personnel coordinated 16 resignations and 4 retirements during the year. Training expenditures for the

1989 fiscal year totalled $38,509. Employees took courses in computer training (44 percent), general skill development (33 percent), and management development (23 percent). Personnel Services cordinated the implementation of a modified work week program and established a reporting system for proper monitoring. Government continued putting into action its centralized personnel administration computer system—the Human Resource Management System. The first phase of training of Personnel Services on the new system is slated for implementation April of 1989.





Highlights and New Initiatives

> Plans were made to begin using the Project Accounting and Management System. This enhancement to the financial management system will provide management and user departments with more timely information and analysis.

> Implementation of the Project Accounting and Management System will continue in 1990. Initially, transactions will be recorded by project number for the larger sections of the department. Identification of information to be managed by the system will be refined and expanded to other sections. A computerized billing process is planned for 1990, using information from the Project Accounting and Management System. When complete, this will greatly increase the efficiency and timeliness of billing.

> The Department honored 7 employees for 25 years of service to the Province. At a special ceremony, the then Lieutenant Governor, the Honorable Alan R. Abraham, presented awards to

Mr. Arnold Dobson

Mr. Glendon Pepperdine

Mr. Kenneth Judge

Mr. Ralph Brimicombe

Mr. Alfred Eisan

Mr. Leonard Wilcox

Mr. John McIntosh

> Administrative Services planned and coordinated a pilot project to collect out-of-date Nova Scotia Government Directories and Maritime Tel and Tel Directories. Approximately 11 818 kg of paper was collected for recycling. The experience helped identify other opportunities for waste management.

> A no-smoking policy for the department was developed and implemented. Initially, Maritime Centre offices became smoke-free followed by other departmental locations.

> The Management Planning and Budgeting System will be more fully implemented throughout the department in 1990. This will increase the involvement and accountability of the department's operating managers in planning and budget setting.

PROPERTY AND OPERATION SERVICES

The Government's Landlord

- acquires and manages all government-owned and government-rented facilities under the direction of the Space Utilization Committee
- provides or obtains the expertise in planning the layout and design of premises to ensure space is properly utilized
- disposes of surplus crown assets, including real property
- acquires real property for client departments
- provides custodial services, elevator maintenance, refuse and snow removal and other day-to-day preventative and corrective maintenance
- provides technical consultant services
- relocates government departments
- monitors, verifies, warehouses and redistributes capital assets
- provides a central stationery supply service
- provides a records storage, retrieval and disposal centre
- provides a means of recycling discarded government paper through the private sector
- provides the government with mail and messenger services
- operates a government-wide insurance and risk management program.

A government cannot work effectively unless it has the proper accommodations and equipment to carry out its day-to-day activities. Property and Operation Services ensures the efficient operation of government through four sections: Building Services, Property Services, Operation Services, and Insurance and Risk Management.

The wide range of our responsibilities requires a cohesive effort on the part of staff—to ensure that client departments are getting the best value for their money. By centralizing the common services provided to government, such as the Stationery Stockroom, direct costs are reduced.

Overview

Building Services continued to provide consulting services for the maintenance of heating, ventilation, air-conditioning and elevator systems in all government-owned buildings. A new emphasis on preventative maintenance has meant an increase in the number of service contracts administered on behalf of other departments.

Our role in determining training requirements for building operators led to a successful pilot project involving 12 building operators, in Transportation and Communications and Lands and Forests buildings.

We are now in the third year of our three-year program for the Digby Pines golf course, one of the finest golf courses in the province. This year construction of the expansion of the new Northumberland golf course will be completed; we anticipate an early 1990 opening.

Property Services is responsible for administering the lease obligations between both government and landlord. The department oversees a total of 296 leasehold properties or 1,558,661 square feet of space. This year, Property Services implemented the government's new lease tender policy.

In addition to acquiring space, this section also disposes of real property surplus to government. Property Services called tenders for, and disposed of, 13 surplus properties.

Operation Services comprises four independent operations. It also manages the department's fleet of vehicles.

The centralized Stationery Stockroom provides a stationery supply service to government departments, boards, commissions, and agencies, through bulk purchasing, which saves money in purchases and storage space. In the past year, 704,865 stationery items were issued, an increase of 24 percent over 1987-88.

The Provincial Records Centre stored 22,876 cartons or 1,143,900 files during 1988-89. The centre is preparing for an increase in the number of departments using its services by adding a staff position to process files designated for destruction. Material resulting from destruction of outdated files is recycled. This year the Sydney satellite inventory warehouse expanded into a regional records storage facility to accommodate the Cape Breton region.

The Inventory Control section verifies the capital asset inventories submitted by various depart-

ments. It also provides departments with information and services that maximize their use of surplus capital assets. The section requisitioned and verified delivery of capital assets for 18 new school projects, a daycare centre, and the expansion of the Art Gallery of Nova Scotia, and coordinated all aspects of new systems furniture installations within nine government departments. Furniture and equipment installed totalled more than $6.6 million, up from last year's $5.23 million in 24 capital projects.

The redistribution of capital assets within government has increased 100 percent over the past five years. Warehouse space increased from 4,000 square feet in 1983, to 19,500 square feet last year. This increase was required because departments are now more aware of the diverse services and quality of items offered by the Department of Government Services.

The Postal Services Branch has evolved from the Mail-Messenger Service and is currently planning its relocation to 1680 Granville Street in the Fall of 1989. It is responsible for acquisitioning all postal equipment required by the government. It has also received its mandate from Management Board to implement programs that will see a substantial savings in all areas of postal services such as courier contracts, postal equipment service contracts, bulk mailing programs and determining the extent of standardization required to meet those guidelines set down by Canada Post for incentive rate qualification.

Insurance and Risk Management maintained and administered a total of 199 insurance policies for 1988-89. These policies protect against the risk of major financial loss to the province on owned and leased property and equipment, specialized computer equipment as well as elevators, boilers and machinery, motor vehicle liability, aviation, marine, accident and bonding exposures. The total cost of insurance, which was purchased through local provincially licensed brokers and insurance companies, totalled $1,105,459. While insured values have increased 9.2 percent over two years, costs have increased only 8.54 percent for the same period. Insured values are now in excess of $1.1 billion.

Highlights and New Initiatives

> Property Services has begun a long-range program of gradually converting government offices to a "system" type of furnishings. Specifications were standardized for seating similar to those now in place for systems furniture. This centralized approach to purchasing quality office furniture seating should save government a substantial amount of money over the long term.

> The installation of systems furniture in nine departments has greatly increased the volume of surplus capital assets available to the balance of government. As a result, many requests for furniture and equipment were filled from surplus assets.

> Inventory Control is developing a program to repair, refinish or upholster furniture and equipment for use by departments.

> Over the past year, we improved our preventative maintenance program. Additional staff have been hired for firetender duties and a successful training program for our building operators was carried out.

> The Postal Services Branch handled six million pieces of Canada Post and interdepartmental mail in 1988-89, an increase of 42 percent over the previous year. The courier to Sydney and Yarmouth increased its yearly volume by 25 percent to 16,353 items. The number of individual accounts increased by 31 percent to 190. Postal services staff stamped mail for 150 accounts at an approximate cost of $843,475.

> The Provincial Records Centre will be used as a depot for recycling paper products as part of the government's recycling initiative.

PUBLISHING AND CREATIVE SERVICES

The Communicators

> develops a wide range of creative information products, such as brochures, posters, forms and annual reports for public and internal information programs for all branches of government

> provides the creative design, editing/writing, typesetting, publishing and printing services for these information programs either directly or through the private sector

> provides the printing and binding services through the Queen's Printers' two plants for provincial statutes, *Journals of the House of Assembly, Hansard, Consolidated Acts, Revisions,* official reports and *Part II of the Royal Gazette*

> prints reports and letterhead stationery for all government departments

> provides the design, panel photography, illustrations, graphics, silk screening, and custom displays and exhibits for all government departments to enable them to participate in trade shows, special events and window displays

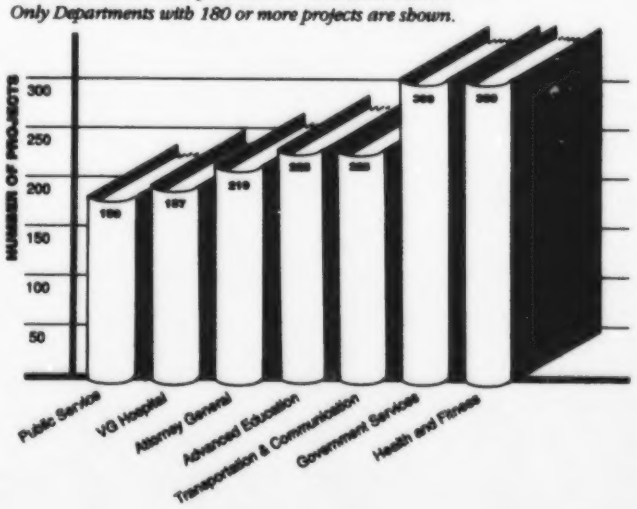
> provides space for these exhibits and displays when required.

One of government's most important challenges is to communicate effectively with the public it serves. Publishing and Creative Services carries out this responsibility through Publishing, Queen's Printer, and Exhibits and Displays.

In-house staff work closely with the private sector to ensure the client department's budget and a high standard of quality are met on each project. As government's information needs change we improve and expand our service.

PUBLISHING PROJECTS BY DEPARTMENT

Only Departments with 180 or more projects are shown.



Overview

The **Publishing** section produced about 3,300 projects, valued at over $2 million.

Desktop publishing hardware and skills have expanded to meet increased demands and to remain on the cutting edge of design in Halifax. Plans were underway at the end of the year to acquire new desktop publishing equipment for two in-house editors and four designers and to upgrade the existing equipment.

The graphic designers and forms analyst provided the finest design concepts for everything from forms, posters and book designs, to major visual identity programs.

An in-house typesetter and desktop operator and production staff worked closely with freelance designers and writers to meet clients' needs efficiently and cost-effectively.

Co-publishing allowed private publishers to produce books they could not otherwise afford to produce.

The **Queen's Printer** provided for many of government's printing needs, materials ranging from envelopes and stationery to reports and brochures. The Halifax plant ran over 30 million impressions and two satellite plants in Truro ran 6.4 million.

The Halifax location printed the *Throne Speech*, the *Budget Address*, the *Estimates of the Government of Nova Scotia* and *Hansard*, maintaining the strictest possible security measures for confidential documents. The Halifax plant added a new press person to its staff to reduce overtime required to meet printing schedules. The Agricultural College satellite acts as the distribution point for federal and provincial agricultural publications. This year, it processed 425 requests for publications, distributing 4,679 pieces of literature.

Exhibits and Displays produced work for tradeshows around the province, across Canada and in the United States. Projects for 1988-89 were valued at $190,000.

Highlights and New Initiatives

Forms orders for the VG Hospital were organized into 12 standing orders for reprint or redesign to run over 12 months. This eliminated the need for rush tenders and overtime costs to accommodate urgent requests due to lack of inventory, saving the hospital a significant amount of money.

The Art Gallery of Nova Scotia moved into its new home in the Fall of 1988. Publishing's designers provided a new visual identity for the Gallery, one that will be rendered, in stationery and granite, marble and plexiglass signage. The Gallery Shop and the Art Sales and Rental Shop also had separate logos designed for their signage and stationery.

Exhibits staff produced interpretive waterfowl signage for provincial bird sanctuaries, mounted in provincial parks. Over 130 signs will be produced with four-colour illustrations.

At year-end Publishing was preparing for its move to the Central Services Building on Young Street, where staff will have more working space.

Tenders were called and awarded for the purchase of a high speed collator, stitcher and trimmer and a shrink-wrapping machine for the Queen's Printer. Queen's Printer staff are also planning to move to another space in the Central Services Building.

SYSTEMS AND COMPUTER SERVICES DIVISION

Information Processors

- provides centralized delivery of data processing, micrographics and telecommunications services
- manages and operate government's shared information processing facilities including the Provincial Data Center, Micrographics Center and the Data Communications Network
- provides operational support, guidance and assistance, and acquires equipment for the above services
- develops information systems plans and defines system requirements
- develops computer systems to operate on the government's central computers
- supports and maintains central systems
- prepares and manages tenders for studies, equipment acquisition and contracted system development
- provides data administration
- arranges installation, relocation, and rearrangement of equipment and telecommunication lines.

Systems and Computer Services responds to government's data processing, micrographics and telecommunications needs. It provides operational support, guidance and assistance. It also helps departments and agencies to acquire equipment and services.

Staff from Client Services, Computer Services, Systems Development and Support, and Telecommunications Services—the division's four sections—work closely with personnel in other departments, determining their systems needs and helping them to learn to use their new systems.

Systems and Computer Services personnel also work closely with Management Board staff to establish policies for acquiring data processing services and equipment. Staff help the Electronic Data Processing Advisory Committee to review departments' long-range systems plans and equipment and service requests. The committee monitors and controls acquisition and implementation of automated systems in the provincial government.

Overview

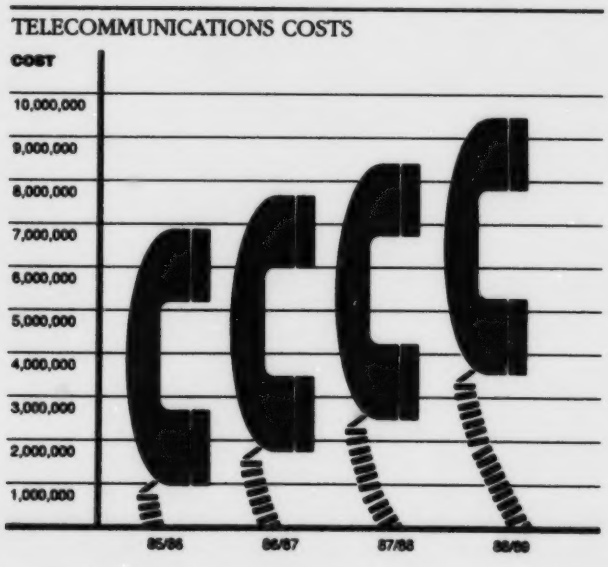
Clients Services staff help departments to develop information systems and to define their requirements. This section also manages tenders for studies and equipment acquisitions. The number of tender calls decreased from 234 in 1988 to 213 in 1989. However, the value of tenders awarded increased from $3,276,349 to $4,448,805. The value of contracted systems consulting and development services also increased, from $1,053,877 to $1,707,696.

Computer Services staff run government's shared information processing facilities — the Provincial Data Centre, Micrographics Centre and Data Communications Network, and provide data entry and output distribution services.

Applications running at the central computing centre continued to expand in number and size in 1988-89. The addition, the number of remote terminal devices connected to the central location increased move than 100 percent to over 700. To provide the required computing capacity, a larger central processor was installed in December.

Systems Development and Support manages the development of computer systems that will operate at the central site. This group designed and developed a vehicle tax collection system for the Department of Finance, an accounts receivable system for the Department of Lands and Forests, and an out-of-province patient billing system and a Medicare claims system for the Department of Health and Fitness. Although these projects are in their initial phases, they have already improved efficiency and financial control, and have increased revenues for the client departments.

The **Telecommunications Services** section again focused on initiatives to modernize

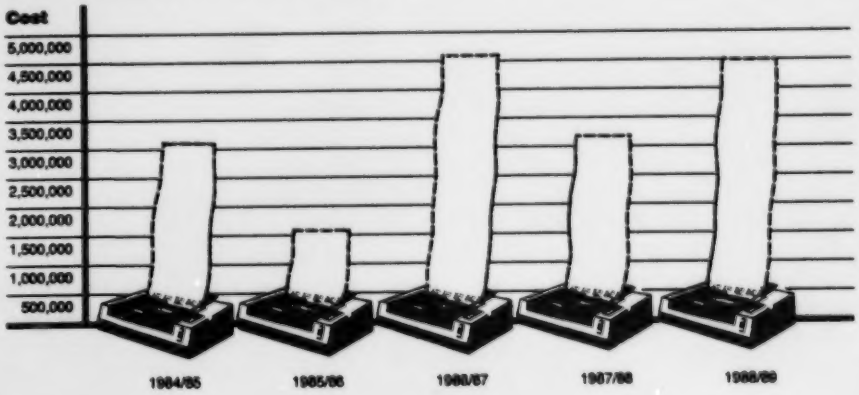


government's telephone systems thereby controlling costs and improving services to users.

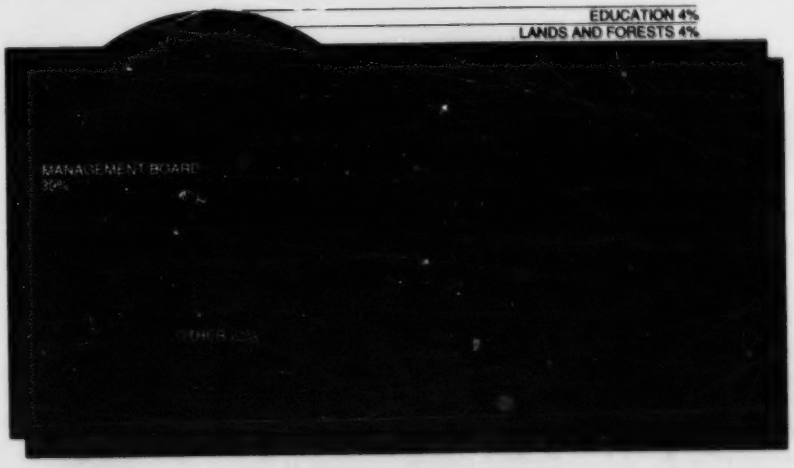
A program to modernize government operations in smaller locations throughout the province was underway; new electronic key telephone systems were installed at about 50 sites. To control basic service costs for the remaining small locations, rate stabilization agreements were implemented during the year, avoiding substantial price increases and fixing rates for two years.

Wide Area Telephone System (WATS) services were expanded, allowing government to better manage long distance costs. Departments now save money when calling outside the Atlantic Provinces on Canada-wide circuits from Halifax. At year-end, staff were evaluating WATS services for Sydney.

COMPUTER CAPITAL EQUIPMENT ACQUISITIONS



SCS PERSONNEL UTILIZATION BY CLIENT



Highlights and New Initiatives

> By the end of 1988-89, approximately 90 percent of users (4500 lines) in Halifax, and 100 percent (600 lines) in Sydney were served by digital centrex, providing government with modern, cost-effective telecommunications services and features.

> Systems Development and Support section staff continued to develop several multi-year projects. The Human Resource Management System is a major reorganization of the automated personnel systems within the entire provincial government, replacing seven systems that were out of date and costly to maintain. It will eventually provide databases on over 20,000 employees and over 10,000 pensioners.

> Systems Development and Support also continued to develop a centralized budgeting system for Management Board, a new appraisal/assessment system for the Department of Municipal Affairs, and a teacher information system for the Department of Education. They enhanced the licensing and registration system for the Registry of Motor Vehicles; this included implementating RMV satellite offices and personalized plates.

> Acquisition of Phase One of a new Telecommunications Information Management System was completed. This system is expected to be running in 1989-90 and will improve management and analysis tools used by section personnel. When fully operational, it will provide a broad range of facilities and improve management, cost control and service capabilities for government.

> Telecommunications staff have finalized plans to establish digital centrex services in Truro.

> Evaluation of new integrated voice and data wiring distribution systems was completed, reducing installation and rearrangement service charges for telephone and computer applications, while improving service reaction time.

> The Systems Development and Support section reviewed its systems development and the methodologies used in the private sector. The objective is to implement a new methodology in 1989-90.

> The Computer Services section planned for its relocation to the Central Services Building on Young Street.
